Validation, Integration and Testing Engineer | Aerospace Engineer -
UPM | Postgraduate Organization Engineering, Project and Business
Administration

Greater Madrid Metropolitan Area

Summary

Aerospace Engineer working at Airbus Helicopters as a Test Engineer on behalf of ALTEN Germany in Bavaria. Doing and performing tests for different parts of the helicopter and making documentation after finishing the uploading of the new software versions. The tests are related to Bench testing. Also, Management of system requirements for the incorporation of a database model of helicopter components for the subsequent creation of tests in the future.

Previously, I have worked as a systems engineer for Indra, in the ATM department. Performing management and specification of system and subsystem requirements.

The specialty studied during the degree is Aerospace Vehicles, where tools such as CATIA, Matlab, ANSYS, Patran-Nastran are used.

I did an internship at INTA as an engineer, where I participated in a project that developed a system for releasing a payload from the helicopter using tools such as Ultimaker Cura 3D for the design of the 3D parts of the release system, Arduino, CATIA or PCB design via DipTrace. Also, I have worked for Deloitte in its technology consulting, using the Salesforce tool in digital transformation both in Field Service and in implementation projects.

I like to learn, so I continually try to train myself by taking courses on programming tools on my own, such as Python, with the aim of having advanced programming knowledge along with what I currently have in tools like Matlab.

Interested in the world of digitalization and engineering, open to new horizons where I can learn new tools and participate in different projects related to the world of technology.

Experience

GMV

Validation, Integration and Testing Engineer

July 2025 - Present (4 months)

Madrid y alrededores

ALTEN Germany

System Engineer & Test Engineer in AIRBUS Helicopters

September 2023 - July 2025 (1 year 11 months)

Munich, Bavaria, Alemania

Working as a Test Engineer in Airbus Helicopters on behalf of ALTEN testing Helicopter systems and making documentation about it.

Experience in Test Bench, doing software test for different parts of the helicopter and try to resolve the errors and problems that it may has.

Testing Database software updates for different parts of the helicopter and doing documentation to be presented and delivered to the other teams which are involved.

Management of system requirements for the incorporation of a database model of helicopter components for the subsequent creation of tests in the future with DOORS.

Writing and modifying requirement, as well as test scripts based on SCADE for the simulator and for testing the requirement modifications in the bech.

Using DO-178 standards. Working on DAL-A.

Also, finding solutions to solve problem requests for requirements with the new implementations the customer wants.

Indra

System Engineer

February 2023 - September 2023 (8 months)

San Fernando de Henares, Madrid, Spain

Working collaboratively with multi-disciplinary teams to manage and specify system and sub-system requirements.

Involved in a project for DFS and LVNL to help them with the requirements needed for the installation of the novel software developed by Indra for the Air Traffic Management.

The tool used for the management of the requirements was Rational DOORS, Rational Change and Excel.

After the tests carried out for the new system updates, a study was carried out on how to implement and fix the errors produced during it. Collaborating with multiple teams inside the company for solving the problems and in continuous contact to find the better solutions regarding to the client request.

Deloitte

Technology Consultant

September 2022 - February 2023 (6 months)

Madrid, Comunidad de Madrid, España

Working on international projects in the energy, real estate and telecommunications sectors. Working closely with multidisciplinary teams to understand specific business challenges and design solutions tailored to their needs. The projects were based in the implementation of Salesforce for simplify how to manage their management.

Instituto Nacional de Técnica Aeroespacial. INTA

System Engineer R&D Internship

February 2022 - May 2022 (4 months)

San Martín de la Vega, Madrid, Spain

As an R&D engineer at the National Institute for Aerospace Technology (INTA), I had the opportunity to actively participate in research and development projects related to unmanned aerial vehicle (UAS) systems. My main responsibilities focused on the design of a payload release system for a UAS, using industry-leading tools. My key tasks included:

Structural design with CATIA: I used CATIA software to carry out the structural design of the payload release system. This involved creating 3D models and then printing them on UltimakerCura using a 3D printer.

Baseplate design with DipTrace: I used the DipTrace tool to design the baseplate for the system.

Research and development: I participated in research activities to identify and evaluate emerging technologies in the UAS field. I conducted extensive testing and analysis to ensure the efficiency and safety of the payload release system.

Team collaboration: I worked closely with other engineers and scientists on multidisciplinary projects, sharing technical knowledge and experience to achieve project goals.

Education

Universidad Politécnica de Madrid

Aerospace Engineer, Aerospace, aeronautical and astronautical engineering · (2017 - 2022)

Universidad Europea

Master's Degree in Organization Engineering, Project Management and Business, Ingeniería · (September 2024 - October 2025)
